Brief Description: Enacting the model distributed generation interconnection procedures and net metering provisions.

**HB 2341 - DIGEST**

Enacts the model distributed generation interconnection procedures and net metering provisions.

Finds that it is in the public interest to simplify the process of interconnecting distributed generation facilities that will be used for net metered customers. This act is intended to both identify a class of distributed generators that, because of their selected point of common coupling, can be interconnected with ease and expedition as well as the standards to be used for ordinary interconnections by all utilities subject to commission regulation.
