

HOUSE BILL REPORT

SHB 1196

*As Passed House
March 6, 1991*

Title: An act relating to the Washington state center for environmental and molecular sciences.

Brief Description: Establishing the Washington state center for environmental and molecular sciences at Washington State University/Tri-Cities.

Sponsor(s): By House Committee on Energy & Utilities (originally sponsored by Representatives Bray, Neher, Jacobsen, Ludwig, Grant, Nealey, Rayburn, Inslee and G. Fisher).

Brief History:

Reported by House Committee on:
Energy & Utilities, February 12, 1991, DPS;
Passed House, March 6, 1991, 97-0.

**HOUSE COMMITTEE ON
ENERGY & UTILITIES**

Majority Report: *That Substitute House Bill No. 1196 be substituted therefor, and the substitute bill do pass.*
Signed by 10 members: Representatives Grant, Chair; H. Myers, Vice Chair; May, Ranking Minority Member; Hochstatter, Assistant Ranking Minority Member; Bray; Casada; Cooper; R. Fisher; Jacobsen; and Rayburn.

Staff: Fred Adair (786-7113).

Background: For the last few years, several of Washington's universities worked collaboratively to meet the upper-division and graduate education needs of the citizens in the Tri-Cities area. In 1989, the Legislature assigned to Washington State University the sole responsibility for ensuring that those needs were met. The University was directed to operate a branch campus in the Tri-Cities area. This branch campus replaced the Tri-Cities University Center, a center that served many of the educational needs of the federal government's Hanford operation, the Hanford contractors, and the citizens of the area, for many years.

Recently, the U. S. Department of Energy has designated Battelle's Pacific Northwest Laboratory in the Tri-Cities as

the Center for Environmental Excellence and as its Molecular Science Center. The department has also designated the Hanford Site to be the focus of waste management and environmental restoration efforts.

Summary of Bill: By November 1, 1991 Washington State University will submit a proposal to the Higher Education Coordinating Board. The proposal will describe a long-term development plan for a center for environmental and molecular sciences at Washington State University/Tri-Cities.

The purposes of the proposed center are described. These purposes include coordinating the relationship of the university with federal research efforts in the Tri-Cities area, and initiating collaborative research efforts with Hanford contractors and staff. With the approval of the Higher Education Coordinating Board, the center will also develop upper-division and graduate instructional programs in environmental assessment, remediation technology, and molecular sciences. The center will develop expertise necessary to assist in technology transfer, and will foster strong, cooperative relationships with governmental agencies and businesses interested in hazardous waste and molecular science research and development. The center will also ensure that expertise from all Washington universities and colleges is available to aid federal research efforts. In addition, the center will ensure that the State and its institutions of higher education are able to benefit from those efforts. Other purposes of the proposed center are also described.

The elements of the proposal to the board are delineated. The board is directed to review the proposal and to evaluate its policy and fiscal aspects. The board will review the proposed center's role and mission within the context of the development plan for Washington State University's branch campuses. By February 1, 1992 the board will recommend to the governor and the Legislature whether to establish a Washington State Center for Environmental and Molecular Sciences. If the board does recommend establishment of the center, the recommendation will include the long-term development needs of the center.

Fiscal Note: Available.

Effective Date: Ninety days after adjournment of session in which bill is passed.

Testimony For: The proposed center would be ideally suited to support the planned increased work involving environmental and molecular science. There likely would be

a linked relationship with the Battelle Pacific Northwest Laboratory, a leading research institution in these fields. There is a need for the curriculum to prepare people to work in the field - to a large extent on the Hanford Reservation. The Higher Education Coordinating Board supports the center, but suggests that more time be allowed to prepare the proposal (which is accommodated in the proposed substitute bill).

Testimony Against: None.

Witnesses: Larry Ganders, Washington State University; Dean James Cochran, Washington State University Branch Campus/Tri Cities; and Marilyn Baker, Higher Education Coordinating Board.
