Brief Title: Attempting to restore the salmon population to an attainable level.

SB 6753 - DIGEST

Declares an intent to develop a structure that allows for the coordinated delivery of state and federal assistance to local communities for the recovery and enhancement of salmon stocks within the state while also addressing improvements to water quality.

Finds that an office should be created within the governor's office to allow important information to be shared among interested parties, and to allow federal agencies and the general public to see what the state is doing to restore salmon to healthy sustainable populations with productive and recreational fisheries.
