

*Natural Resources Committee*

**HB 2104**

**Brief Description:** *Providing for an increase in forest fire protection funds.*

**Sponsors:** *Representatives Rockefeller (co-prime sponsor), Sump (co-prime sponsor), Pearson and Doumit.*

**Brief Summary of Bill**

- *Declares it the state policy that the costs of fire protection for forest lands be equitably shared between forest landowner assessments and a state match.*
- *Establishes a target dollar amount for the state to reach full funding of the TriData report recommendations by the end of three biennia.*
- *Increases the assessment for fire protection for parcels of land over fifty acres by three cents for every acre over fifty acres, and makes the increase contingent upon the state funding its equitable share of forest fire protection.*

**Hearing Date:** *2/19/01*

**Staff:** *Bill Lynch (786-7092).*

**Background:**

*Owners of forest land are required to adequately protect against the spread of fire from or onto their property during the fire season. The Department of Natural Resources (DNR) is required to provide fire protection for forest landowners who are unable to provide their own fire protection. DNR provides forest fire protection to much of the forest land in the state, and may contract out fire protection services with local governments.*

*DNR funds the cost of providing forest fire protection to forest landowners through forest protection assessments and state general fund appropriations. The annual forest protection assessment imposed on a forest landowner in a forest protection zone for each parcel of land is a flat assessment of \$14.50, plus twenty-two cents per acre for every acre over fifty*

acres.

*A 1997 study by TriData of the state fire program for forest lands compared the amount of funding received for fire protection by fund source among several western states. This study found that Washington state contributes the smallest percentage of funds for fire protection from its state general fund, and the highest percentage of funds for fire protection from landowner assessments. This study considered it imperative that a more equitable split between the state general fund and landowner assessments be established for forest protection. Concerns were also raised in the study about the state's ability to provide adequate fire protection because of inadequate resources.*

**Summary of Bill:**

*The Legislature declares it the policy of the state to equitably share the costs of fire protection between the forest fire protection assessment account and an equivalent state match. The Legislature also declares that sufficient funds must be committed to the forest fire protection program so that the recommendations of the TriData study can be implemented on an equitable basis by the end of the 2005-07 biennium.*

*The assessment for forest protection is increased for parcels of land that exceed fifty acres from a flat fee plus twenty-two cents per acre for every acre over fifty acres, to a flat fee plus twenty-five cents per acre for every acre over fifty acres. This three cent increase in landowner assessments is contingent upon the state providing its equitable share of forest fire protection. If the state fails to fund its equitable share, the three cent increase in landowner assessments is null and void for the time period that the state does not fund its equitable share.*

**Appropriation:** None.

**Fiscal Note:** Requested on February 14, 2001.

**Effective Date:** Ninety days after adjournment of session in which bill is passed.
