**HB 1152**

**Brief Description:** Providing technical assistance to achieve voluntary compliance with water pollution control statutes.

**Sponsors:** Representatives Smith, Schmick, Blake, Warnick, Takko, Ross, Pearson, Short, Van De Wege, Orcutt, Bailey, Kristiansen and McCune.

**Brief Summary of Bill**

- Requires the Department of Ecology, in certain circumstances, to make determinations and provide technical assistance prior to issuing a notice of violation or penalty for a pollution violation.

**Hearing Date:** 1/28/11

**Staff:** Courtney Barnes (786-7194).

**Background:**

Water Pollution Control Violations.

The Department of Ecology (Department) is charged with controlling and preventing the pollution of waters of the state. The Department is also the designated water pollution control agency for the purposes of the federal Clean Water Act. The Department has the authority to adopt rules and regulations related to its water pollution control authority and may, with the assistance of the Attorney General, bring appropriate legal actions to fulfill its responsibilities.

It is unlawful to discharge or to permit the discharge of organic or inorganic matters that cause or tend to cause pollution in waters of the state [RCW 90.48.080]. However, the disposal or discharge of solid or liquid waste material into the waters of the state may be allowed by permits issued under the National Pollutant Discharge Elimination System (NPDES) permit program.

The NPDES permits are issued for various commercial and industrial activities, including Concentrated Animal Feeding Operations.

Provisions governing water pollution controls specify civil penalties for persons who:

- violate the terms or conditions of a NPDES permit;
- conduct a commercial or industrial operation or other point-source discharge operation without a required permit; or
- improperly discharge polluting matters in waters.

Civil penalties for violating water pollution controls include fines of up to \$10,000 per day per violation. Imposed penalties may be appealed to the Pollution Control Hearings Board within 30-days after receipt of the penalty notice by the applicable person.

#### Technical Assistance Programs.

Regulatory agencies, a term defined to mean agencies that have the authority to issue civil monetary penalties, are required to develop programs to encourage voluntary compliance by providing technical assistance that is consistent with statutory requirements [Chapter 43.05 RCW]. The programs must include, but are not limited to, technical assistance visits, printed information, and information and assistance by telephone. Subject to certain limitations, persons who have received a technical assistance visit must be given a reasonable period of time to correct violations identified during a visit before a civil penalty may be imposed for those violations.

#### **Summary of Bill:**

For lands on which livestock graze or seek feed in pastures, fields, or rangeland, the Department must first make a determination that a water quality problem exists and a pollution violation has occurred due to the presence of livestock. This determination must be made before a notice of violation or a penalty may be assessed. When the Department determines that a pollution violation has occurred or is about to occur, it must first attempt to achieve voluntary compliance by offering information and technical assistance in writing. If education and technical assistance fail to remedy the problem, the Department may then issue a notice of violation.

**Appropriation:** None.

**Fiscal Note:** Requested on 1/17/2011.

**Effective Date:** The bill takes effect 90 days after adjournment of the session in which the bill is passed.
