State of Washington

63rd Legislature

2014 Regular Session

By Senators Billig, Ericksen, McCoy, and Rolfes

Read first time 01/15/14. Referred to Committee on Energy, Environment & Telecommunications.

1 AN ACT Relating to reducing polychlorinated biphenyls in Washington
2 state; reenacting and amending RCW 39.26.010; adding new sections to
3 chapter 39.26 RCW; and creating a new section.

4 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

5 NEW SECTION. **Sec. 1.** Polychlorinated biphenyls, commonly known as
6 PCBs, are a family of human-made organic chemicals that were used in
7 many industrial and commercial products such as insulating fluids for
8 electric transformers and capacitors, hydraulic fluids, plasticizers,
9 paint additives, lubricants, inks, caulk, and carbonless copy paper.
10 PCBs were used because of their fire resistance, chemical stability,
11 and electrical insulating properties. PCBs are also found in products
12 as an unintentional by-product of manufacturing processes. PCBs are
13 ubiquitous in the environment because of their stability, extensive
14 previous use, by-production in manufacturing, inadvertent release, and
15 the inability to control and eliminate them through current waste
16 management practices. PCBs are persistent, bioaccumulative, and toxic,
17 and they cycle between the air, soil, and water. PCBs have been shown
18 to cause cancer and affect the human immune, reproductive, nervous, and
19 endocrine systems. The United States toxic substances control act

1 prohibited the commercial production of PCBs in 1979. However, the
2 United States environmental protection agency rules implementing the
3 ban provides exemptions for certain products containing PCBs at
4 concentrations of fifty parts per million or less as a result of
5 manufacturing processes and therefore the continued manufacture,
6 processing, distribution, and use of products containing PCBs remains
7 permitted.
